Beetle-The CMS

Guidelines:

1. Once you have downloaded 'Beetle-The CMS' package, you may extract it to your localhost server.
   (If you are using, wamp, extract to the folder named 'www'; 'htdocs' folder may be used in case of xamp).

2. Start your localhost server.

3. Create a database with name 'phpcms' in your server.

4. Open the file config.php in any of the text editors. Set database username and password, and save.

5. In your web browser, enter the url 'localhost/beetle/install.php' and run.

6. Once you have successfully installed the cms, delete file install.php from the folder 'beetle', for enhanced security.

7. You may login to the admin panel through the url 'localhost/beetle/login.php'.

8. Default username and password are 'admin' and 'test' respectively. It is recommended that they may be changed before you start using our cms. You may find options for the same in the login page.

9. In order to add images to your website, they must be located in the folder beetle/admin/images.

10. You may add templates from anywhere in your system provided they must be css files in the specified format.

11. You can also create templates for our cms. Check guidelines in our website www.beetlethecms.com.

12. You can completely customize webpages through the admin panel.

13. You may add registration forms to your website and review the user entered values through the admin panel.

14. You are provided with the facilities of configuring the homepage, navigation and ordering of webpages and lots more in the admin panel.

15. For detailed description of installation and use of Beetle-The CMS, visit our website www.beetlethecms.com
